

AbsurdSenapiii Labs Master Research Document

Singapore Budget 2026 AI Strategy + AbsurdSenapiii Labs Alignment Blueprint
Date: 05 Mar 2026

Prepared for: Internal strategy, narrative design, and generative media production

This document synthesizes Singapore's 2026 national focus on AI (as communicated in Budget 2026 materials and associated announcements) with an institutional design proposal for AbsurdSenapiii Labs: a storytelling institution that turns AI deployment into durable job creation through training pipelines, provenance infrastructure, and alignment governance. The alignment layer is grounded in PAD-0001: Pre-AGI Dossier Zero (uploaded reference document).

How to use this document

- Use Sections 1-3 to understand the Singapore AI policy stack and its explicit 'no jobless growth' constraint.
- Use Sections 4-6 to translate policy intent into an institutional operating model (missions, governance, metrics).
- Use Section 7 to generate cohesive visuals and video briefs (master prompt templates).
- Use Section 8 for references and source links.

1. Executive summary

- Budget 2026 frames AI as a national lever for competitiveness and resilience, while rejecting 'jobless growth' as an acceptable outcome [1][2].
- Delivery is a stack: AI Missions in priority sectors, a National AI Council chaired by the Prime Minister, regulatory sandboxing, enterprise adoption programmes, and workforce upgrading [1][3].
- Singapore is investing over S\$1 billion (2025-2030) under the National AI Research and Development (NAIRD) Plan, spanning fundamental research, applied research, and talent, including responsible and resource-efficient AI [4].
- This document proposes AbsurdSenapiii Labs as 'storytelling-as-infrastructure' that converts AI adoption into jobs via: (a) a production plus training campus (Buni Media Hub), (b) a licensing and provenance exchange (ACX), and (c) alignment and integrity governance compatible with national mission execution.
- PAD-0001 provides the governance spine: preservation of human agency, epistemic integrity, and antifragility; translated here into concrete release gates, audit artifacts, red-team drills, and incident learning loops [8].

2. Policy context: what Singapore is signaling in 2026

The 2026 messaging is unusually explicit about both opportunity and risk. AI is framed as a strategic advantage, but the government signals it will shape outcomes to ensure growth translates into good jobs and better wages, not only higher productivity [1][2]. Key implementation patterns include mission-orientation, national coordination (council-level), enterprise transformation support, and workforce upgrading with practical access to tools and pathways [1].

Key policy levers (high level)

- National AI Council (chair: PM) to provide strategic direction and drive AI agenda [3].
- AI Missions in four focus areas (advanced manufacturing, connectivity/logistics, finance, healthcare) [1][3].
- Enterprise adoption and transformation programmes (e.g., Champions of AI) plus expanded support schemes [1].
- Physical clustering: AI park / Kampong AI at one-north / LaunchPad refresh (pilot from March 2026; completion targeted 2028) [5].
- NAIRD Plan funding (2025-2030) for research and talent, including responsible AI priorities [4].

3. Translating the national AI stack into an institutional design pattern

The design move in Budget 2026 is mission-orientation plus workforce coupling: avoid scattered pilots, define outcomes, and align R&D; regulation, enterprise incentives, and training so institutions act in concert [1]. AbsurdSenapiii Labs can mirror this as a cultural and economic analogue: not a content studio, but an infrastructure layer that turns storytelling into exportable IP, training ladders, and high-integrity synthetic media standards.

Policy lever mapping table

Policy lever	Policy intent	AbsurdSenapiii Labs analogue	Job-creation design note
National AI Council + mission governance [1][3]	Coordinate strategy and execution across agencies and sectors	Mission Board for narrative missions (StoryOps)	Every mission includes a job ladder and editor-of-record roles
AI Missions (priority sectors) [1]	Concentrate on transformable, high-impact domains	Narrative Missions: Education-as-Story, Provenance Media, SEA IP export	Tie each mission to apprenticeships and wage progression metrics
Regulatory sandboxes + responsible deployment [1]	Enable testing with safeguards and clear rules	Synthetic Media Sandbox (provenance, watermarking, disclosure)	Sandbox KPIs include auditability and misinformation resilience
Cluster / Kampong AI at one-north [5]	Create ecosystem density and collaborations	Buni Media Hub Studio-Learn Campus near startups	Accelerate skill-to-job conversion via colocated sprints
NAIRD Plan (2025-2030) [4]	Strengthen AI research and talent, incl. responsible AI	Narrative Alignment R&D; Cell (provenance evaluation, red teaming)	Treat integrity tooling as a production dependency, not a feature

4. Alignment and governance: PAD-0001 as operating system

PAD-0001 is written as a charter to preserve human agency, epistemic integrity, and systemic antifragility in high-stakes AI contexts. It treats these as invariants and insists on institutional diagnostics, red-teaming, and concrete protocols (audit checklists and emergency response patterns) [8].

Operational translation into AbsurdSenapiii Labs

- Human agency by design: final-cut authority, named editor-of-record, and delegation limits for high-reach publishing.
- Epistemic integrity as a production dependency: provenance-by-default, disclosure semantics, and truth-sensitive modes for civic/educational content.
- Antifragility through controlled failure: red-team sprints, incident registry, post-mortems, and standards patches shipped on a fixed cadence.
- Graceful degradation: if provenance or integrity tooling fails, distribution throttles automatically to reduce harm radius.

Governance artifacts (minimum viable set)

- Mission charter (outcomes, jobs, wage progression targets).
- Model and asset cards (what was generated, by which model, with which constraints).
- Provenance chain logs (prompt lineage, approvals, edits).
- Red-team reports (attack prompts, spoof attempts, failure cases).
- Incident post-mortems (root cause, patch shipped, lesson captured).

5. 'No jobless growth' as a measurable constraint

In labour economics, 'jobless growth' is commonly discussed as a situation where output expands without commensurate job creation, often measured via employment intensity (elasticity) of growth [6]. In Singapore's 2026 framing, the objective is explicit: exploit AI for growth and ensure growth translates into good jobs and better wages, including protecting entry-level rungs and improving training investments [2].

Proposed KPI set for an internal dashboard

KPI	What it measures	Why it matters
Employment intensity of growth	Whether growth translates into jobs	Direct signal for jobless growth conditions [6]
Entry-level role availability index	Share/count of entry-level postings	Detect hollowing-out of first rung roles [2]
Wage progression after reskilling	Real wage delta 6-18 months post-training	Ensures training converts to better outcomes
Training investment per worker	Training hours + applied project completion	Counters underinvestment risk in AI transformation [2]
Provenance compliance rate	Percent of outputs with valid provenance chain	Integrity guardrail for synthetic media [1][8]
Incident learning velocity	Time from incident -> patch shipped	Antifragility metric (stronger after failures) [8]

6. Risks, mitigations, and 2026-2030 roadmap

The policy posture emphasizes moving with speed and scale. That increases system risk unless sandboxes, monitoring, and rollback paths are real. The key risks and mitigations below align to the policy framing and PAD-style safeguards.

Risk register (condensed)

Risk	Mitigation (design response)
Speed amplifies systemic shocks	Use continuous sandboxes, pre-release red teaming, and rollback gates [1][8].
Labour-market bifurcation	Couple incentives to job redesign plus apprenticeship ladders and wage targets [2].
Epistemic degradation via synthetic media	Provenance-by-default, disclosure rules, third-party audits, and trust marks [1][8].
Geopolitics and contested supply chains	Position as trusted hub; separate cultural export from manipulation via transparency and audits [7].

Roadmap milestones (illustrative)

- 2026 H1 - National AI Council stands up; mission scoping; NAIRD plan execution ramps [1][3][4].
- 2026 H1 - Kampong AI pilot begins (LaunchPad at one-north) [5].
- 2026 H2 - First mission pilots; enterprise transformation cohorts; early workforce pathways scale [1][2].
- 2026 H2 - AbsurdSenapiii Labs: provenance standard v1; Buni Media Hub pilot sprint; ACX alpha spec.
- 2027-2028 - Cluster densification; apprenticeship intake scale; ACX launches licensing registry; export slate grows [5].
- 2029-2030 - NAIRD plan cycle completes; evaluation and next-tranche design; trust premium export matures [4].

7. Master prompt pack (visuals + video)

This section turns the synthesis into reusable generative templates. Prompts are written to be model-agnostic and emphasize Singapore-specific near-future realism, visual novel UI grammar, and alignment motifs shown visually (not narrated).

7.1 Canonical world prompt (key art)

Cinematic anime visual novel concept art, landscape composition, ultra detailed.

Year 2026, Singapore Marina Bay skyline at twilight. The city is illuminated by holographic AI infrastructure - data streams, neural networks, mission dashboards, and training pathways representing national coordination.

Foreground: Bunny CEO (pink hair, light blue eyes, petite anime style, bunny ears) stands on a rooftop with a tablet showing narrative nodes:

- Storytelling Institution
- AI Alignment Infrastructure
- Buni Media Hub
- Anime Central Exchange
- Human Agency Systems
- Future Job Creation

Beside her: silver-haired ACX CEO bunny reviewing economic dashboards (auction markets, creator economies, AI-assisted commerce, job creation graphs).

Nearby: the Jester holds a glowing document titled "PAD-0001 Pre-AGI Dossier" emitting symbols for human agency, epistemic integrity, and antifragility.

Background: one-north and the broader skyline appear as a global AI coordination hub (research labs, sandboxes, education pipelines).

Mood: optimistic and procedural, not dystopian. Technology amplifies humans.

Visual tone: soft neon reflections, warm lighting, high-detail cityscape, legible UI overlays in English (en-SG).

Negative constraints: no gore, no sexual content, no hate symbols, avoid generic cyberpunk tropes, avoid unreadable text.

Output: 4K concept art, one frame, visual novel key art composition.

7.2 Template prompt with variables

You are creating cinematic anime visual novel key art set in near-future Singapore (2026-2030).

Scene: [SCENE_TITLE]. Location: [LOCATION].

Institutional world: AbsurdSenapiii Labs operates as storytelling-as-infrastructure, with:

- Buni Media Hub (production + training)
- Anime Central Exchange (ACX) (licensed asset exchange + provenance registry)

National backdrop: Budget 2026 AI focus and 'no jobless growth' objective shown through environmental storytelling:

mission dashboards, training pathways, audit boards, and public signage.

Main characters:

- [PROTAGONIST], role: [ROLE]
- [COUNTERPART], role: [ROLE_2]

Tone: [TONE]

Alignment motifs must be visible:

- Human agency: editor-of-record nameplate, final approval stamp, two-key release control
- Epistemic integrity: watermark glyphs, provenance chain UI, 'truth spine' thread
- Antifragility: kintsugi repair, incident-to-improvement wall, red-team prompt boards

Art direction: ultra-detailed anime cinematic lighting, realistic Singapore architecture cues, legible UI overlays, 35mm lens look.
Camera: [CAMERA]. Lighting: [LIGHTING].
Include: dashboard showing Jobs created / Wage progression / Provenance compliance with believable numbers.
Negative constraints: no gore, no sexual content, no hateful symbols, avoid unreadable text.
Output: 4K concept art, one frame.

7.3 Video brief prompt (60-90 seconds)

Create a 60-90 second cinematic anime short (visual novel aesthetic) set in near-future Singapore (2026-2030).
Premise: AI adoption accelerates, but the society commits to 'no jobless growth' and trusted deployment. AbsurdSenapiiii Labs operationalizes alignment: human agency, epistemic integrity, antifragility.

Structure:

- 0-15s: Skyline + mission dashboards (jobs, wages, provenance compliance)
- 15-35s: Buni Media Hub: apprentices learn; AI assists; human editor stamps final approval
- 35-55s: ACX exchange: licensed assets + provenance ledger; watermark glyphs
- 55-75s: Red-team drill: adversarial prompts; incident; patch ships; kintsugi repair visual
- 75-90s: New roles shown (auditor, StoryOps lead); tagline: Tools serve people

Style: high-end anime film lighting, Singapore architecture cues, clean UI overlays in English, cinematic camera moves, sound design cues.

Safety: no violence, no political manipulation, no hate symbols, no explicit content.
Deliverables: storyboard (10-14 shots) + voiceover script + on-screen text plan + end title card.
