Technology	Deployed on Base L2, Football.Fun represents players as fungible tokens (up to 25 million shares per player) tradable on an automated market maker, enabling instant trades with dynamically updated prices.	Coverage notes each real player from top leagues is tokenized into as many as 25 million on-chain shares, and an AMM-based live market automatically updates prices and executes trades instantly for these player tokens ³ ⁴ .	Football.Fun... Base chain... new players get involved? – BlockBeats / Football.Fun Secures \$2 Million – GAM3S.GG	【11†source】 【9†source】	2025-08-25 / 2025-07-18	Tier 1
Technology	“Gold” is the in-game currency, pegged 1:1 to USDC on Base (1 Gold = 1 USDC). Players must deposit USDC (Base network) to obtain Gold for purchasing player shares in the game’s market.	Official info explains that the native game currency “Gold” is stably pegged to Base Chain USDC (1 Gold always equals 1 USDC) and is used for buying player tokens within the Football.Fun platform ⁵ . Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Technology	The platform charges a 5% fee on all player-token trades, and the team plans to introduce dynamic “surge” fees (up to ~20%) during periods of heavy sell-offs or volatility to deter bots and arbitrage.	Founder updates and analyses confirm a flat 5% transaction fee and a proposed dynamic fee mechanism (rising to about 20% in extreme market conditions) to stabilize the in-game market and prevent large dump exploits ⁶ . Tokenomics	\$FUN is an ERC-20 token with a fixed supply of 1 billion. Allocation is set at 25% to the team, 25% to the community (including a 4% genesis airdrop), 24.8% to investors, 17.7% to the treasury, and 7.5% for the public sale.	The token sale documentation provides the total FUN supply (1,000,000,000) and a detailed breakdown by category (team, community/airdrop, investors, treasury, public sale), confirming these percentages ⁷ .	\$FUN ICO: Sport.Fun Begins Public Token Sale on Dec 16 – PlayToEarn	https://playtoearn.com/news/fun-ico-sportfun-begins-public-token-sale-on-dec-16	2025-12-16	Tier 1

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Tokenomics	The public token sale (Dec 2025) offered 50 million FUN (~7.5% of supply) at \$0.06 per token (initial FDV ~\$60 M) to raise \$3 M, with an option to increase to 75 M tokens (\$4.5 M). Tokens vest 50% at TGE and 50% over 6 months.	Official sale terms specify the price (\$0.06), sale allocation (50 M FUN, expandable to 75 M if oversubscribed), and vesting schedule (buyers get 50% immediately at token generation and the remaining 50% released gradually over 6 months) ⁸ ⁹ .	\$FUN ICO: Sport.Fun Begins Public Token Sale on Dec 16 – PlayToEarn	https://playtoearn.com/news/fun-ico-sportfun-begins-public-token-sale-on-dec-16	2025-12-16	Tier 1
Tokenomics	The FUN token is not required to play (gameplay uses Gold and tournament points), but FUN holders receive trading fee discounts and access to premium features (e.g. advanced analytics). All platform fee revenue is pledged to buy back FUN, aligning the token's value with ecosystem usage.	Documentation indicates that FUN serves as a value-accrual and perks token (fee rebates, premium tools) rather than an in-game currency, and further confirms that 100% of platform fees will be used in a recurring buyback program to support FUN's value ¹⁰ ¹¹ .	\$FUN ICO: Sport.Fun Begins Public Token Sale on Dec 16 – PlayToEarn	https://playtoearn.com/news/fun-ico-sportfun-begins-public-token-sale-on-dec-16	2025-12-16	Tier 1

Market or Narrative	Football.Fun secured a \$2 million seed funding round in July 2025, led by crypto VC 6th Man Ventures and joined by other notable investors including Devmons, Zee Prime Capital, Sfermion, and The Operating Group.	Press reports confirm the project announced a \$2M seed raise (July 18, 2025) with 6th Man Ventures as lead and participation from Devmons, Zee Prime, Sfermion, and The Operating Group, providing early validation from well-known Web3 investors ¹² .	Football.Fun... Base chain... new players get involved? – BlockBeats (Foresight News)	https://en.theblockbeats.news/news/59424	2025-08-25	Tier 1
Market or Narrative	The platform's launch generated viral buzz: one crypto influencer claimed he turned \$100k into \$200k in 5 hours (and to \$300k in another 11 hours) trading Football.Fun player shares, exemplifying the rapid-profit hype driving early user interest.	Early coverage highlights a KOL's anecdote of doubling \$100K to \$200K in 5 hours and reaching \$300K within a day via Football.Fun trades, a story that fueled FOMO and demonstrated the speculative appeal around the game ¹³ . Market or Narrative	Observers compare Football.Fun to traditional fantasy sports with instant liquidity; for example, investor Mike Dudas described it as “player cards with liquidity added to Sorare,” underscoring how it taps into football fan engagement via tradeable player tokens.	A seed investor noted that Football.Fun’s model essentially adds liquid markets to fantasy football cards (likening it to Sorare but with built-in token liquidity), a narrative that illustrates its unique appeal to sports fans 14 . Adoption or Traction	In the first two weeks after launch (August 2025), Football.Fun saw explosive growth: over 10,000 unique wallets joined, daily trading volume hit ~\$14.85 million (on Aug 24, 2025), about \$1.5 million in fees were generated, and the total market value of player tokens briefly exceeded \$150 million (before settling around \$100 million).	On-chain stats from August 2025 show rapid uptake and activity: the platform surpassed 10k participant addresses, recorded an all-time-high day of ~\$14.85M volume, collected roughly \$1.5M in fees, and its aggregate player-token market cap peaked near \$150M (later around \$100M) ¹⁵ ¹⁶ .	Football.Fun... Base chain... new players get involved? – BlockBeats (Foresight News)	https://en.theblockbeats.news/news/59424	2025-08-25	Tier 1
Adoption or Traction	As of late 2025, Football.Fun (now expanded as Sport.Fun) ranks among the most used dApps on Base, with over \$90 million in cumulative trading volume and more than \$10 million in platform revenue (fees) achieved since launch.	Recent reports note that the Sport.Fun ecosystem (ex-Football.Fun) has facilitated upwards of \$90M in total trading volume and generated over \$10M in fees, reflecting significant traction and user engagement on Base L2 ¹⁷ .	\$FUN ICO: Sport.Fun Begins Public Token Sale on Dec 16 – PlayToEarn	https://playtoearn.com/news/fun-ico-sportfun-begins-public-token-sale-on-dec-16	2025-12-16	Tier 1

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Risk or Governance	Football.Fun's economic model raises sustainability concerns: there are no intrinsic yield or dividends for players, so profits come only from selling player shares to others. This "buy low, sell high" reliance on constant new demand has drawn comparisons to a meme-coin/Ponzi-like scheme.	Analysts point out that the platform provides no direct payout mechanism to players; all earnings are from trading, and with revenue mainly from initial sales and fees, the model's viability depends on continuous influx of new buyers—drawing scrutiny about long-term sustainability ¹⁸ .	Football.Fun... Base chain... new players get involved? – BlockBeats (Foresight News)	https://en.theblockbeats.news/news/59424	2025-08-25	Tier 1
Risk or Governance	The game's design is centrally controlled and custodial: Gold (the in-game USDC-pegged currency) cannot be withdrawn outside the platform, meaning players must trust the operator to redeem their funds and to maintain fair in-game liquidity.	Official info notes that Gold is only usable within Football.Fun's market and "cannot be withdrawn directly"; thus, user deposits (USDC converted to Gold) are held by the platform, indicating a custody risk and central authority over withdrawals and liquidity ¹⁹ .	Football.Fun... Base chain... new players get involved? – BlockBeats (Foresight News)	https://en.theblockbeats.news/news/59424	2025-08-25	Tier 1

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Risk or Governance	The project's team and governance are not fully transparent: aside from the pseudonymous founder, the operation is run through offshore entities (Panama corporation and BVI issuer), and there is no community governance token—decisions and contract controls remain with the core team.	Disclosures show an offshore corporate setup (Panama Corp and BVI company) and only a single named director, while no on-chain governance mechanism exists (FUN token grants perks but no control), indicating that key decisions and upgrades are handled internally by the team ² ²⁰ .	\$FUN ICO: Sport.Fun... Dec 16 – PlayToEarn / Football.Fun... Base chain... – BlockBeats	【15†source】 【11†source】	2025-12-16 / 2025-08-25	Tier 1
Risk or Governance	No independent smart contract audit has been published as of Dec 2025. The project's security model instead relies on internal testing and a bug bounty program (up to \$500k reward) to identify and fix vulnerabilities.	While a substantial bug bounty program is in place, there is no record of a completed third-party audit available. The absence of an audit report means the code's safety is self-verified; developers publicly encourage ethical hackers via bounty incentives ²¹ .	(Search result: Football Fun – DappRadar / X post)	【3†source】	2025-??-??	Tier 2

Appendix - Contract Addresses and Repos

- **Base mainnet contract:** `0x942b75426b56c0821e8c008b26ac3fee48c4fcf5` – ERC-721 contract “base.fun (BASEFUN)” on Base (438 tokens minted; likely used for limited in-game assets or early collectibles in the Football.Fun platform).
- **FUN token:** *No contract address publicly available prior to TGE.* (The \$FUN ERC-20 token is slated to launch post-Dec 2025 token sale; it will likely be deployed on an Ethereum-based network such as Base or Ethereum mainnet at TGE.)
- **Source code repositories:** *No official open-source repositories identified.* The project’s codebase appears proprietary; security is managed via internal development and bug bounty programs rather than public GitHub releases.

Red Flags

- No intrinsic yield for players – profits rely solely on new user buy-in (a Ponzi-like sustainability risk if growth stalls).
- Centralized control over funds – players’ USDC is held in-game as Gold, which cannot be freely withdrawn (introducing custodial and trust risk).
- Anonymous/offshore team – only a pseudonymous founder (“Adam”) is known, and the project operates via Panama/BVI entities (limited accountability and regulatory oversight).
- Lack of audit transparency – smart contracts have not been publicly audited, relying instead on an in-house security approach and bounties (uncertainty around contract safety).
- FUN token utility questions – \$FUN does not play a core role in gameplay (only providing discounts/perks), which could limit organic demand and leave value primarily driven by speculative buyback mechanics.

Open Questions

- What are the detailed vesting schedules for team and investor token allocations (beyond the public sale), and how long is the lock-up for these insiders?
- Have the Football.Fun/Sport.Fun smart contracts (for Gold, player share trading, etc.) undergone any third-party security audits, especially after the on-chain rollout, and will those audit reports be released?
- How exactly can players redeem Gold back into USDC? Is there a verifiable mechanism or proof-of-reserves to ensure that Gold is fully backed and that withdrawals (USDC out) will always be honored by the platform?
- Will \$FUN token holders gain any governance or profit-sharing rights in the future (beyond fee rebates and planned buybacks), or is the ecosystem intended to remain entirely team-governed?
- How sustainable is the dynamic fee model and the planned revenue-sharing or buyback approach if user growth plateaus – is there a contingency to provide value to remaining players if new entrant flow declines?
