

Executive Summary

- **Token Launch Completed:** AbsurdSenapiii Labs formally launched the Absurd Bunny Unit (BUNI) token via the SOAR platform. The launch was framed as a capped participation unit layered on the existing business, with fixed initial supply and on-chain governance rules ¹ ². The organization emphasized no change in core work, no equity issuance, and no promise of returns in connection with BUNI ³.
- **Institutional-Grade Reporting:** The team published rigorous, evidence-based reports and frameworks. This includes a frontier “red team” due-diligence report on BUNI and a universal merit-audit framework (BUNI-005) for complex systems ⁴ ⁵. All reports were written in plain English and designed to withstand review by regulators and auditors ⁶ ⁴.
- **Transparency and Self-Audit:** The lab ran public governance experiments and invited critique. For example, it conducted an internal “self-red team” process and documented it in a report, and it openly solicited adversarial feedback on its analysis of xAI’s Grokipedia ⁶ ⁷. The communications stressed institutional rigor over optics.
- **Research and Publications:** Beyond token matters, the teams advanced research in niche areas. Notable outputs include analyses of anime trading-card markets (addressing custody and liquidity), a Singapore-focused meritocracy evaluation, and a framework for recognizing illiquid asset value in banking ⁸ ⁹. These were presented as neutral, red-team-ready analyses with no price forecasts or hype.
- **Communications Posture:** Public messaging remained conservative and factual. Posts emphasized deliberate execution over engagement, AI workforce upskilling (favoring “AI operators” over displacement), and infrastructure readiness (securing alignment domains, building neutral spaces) ¹⁰ ¹¹. The founder noted that the team would be “less active” publicly during launch stabilization, focusing on monitoring and risk control ¹².
- **Infrastructure and Governance:** Foundational work continued in parallel. The organization secured key digital assets (e.g. “AlignmentHub” Twitter, alignmentlab domain, etc.), and established neutral governance research units (such as Bunny Land Public Policy Offices) to test institutional designs in controlled settings ¹³ ⁴.

Organizational Activity Breakdown

- **Token Operations:** The BUNI token launch was executed under a formal agreement with predefined rules ¹⁴. Supply is fixed; any future issuance or transfers must follow on-chain protocols (no discretionary minting) ¹⁵. The launch was explicitly described as *not* an equity offering, not a promise of returns, and not a solicitation ³. In the immediate post-launch period, the team focused on monitoring liquidity and stability. Public commentary was suspended for a day to concentrate on launch execution and risk review ¹². Communications from leadership stressed that this initiative is operational (funding infrastructure and aligning incentives) rather than promotional.
- **Research & Development:** The labs continued to produce and publicize long-form analyses. Key research outputs in this period included: the **BUNI-005 framework** – a universal merit/system audit released as a regulator-ready whitepaper ⁴ ⁵; a **national assessment of Singapore** under the same framework ¹⁶; and a **US complex-system evaluation** report (BUNI-005 Applied to the United States) intended for policymakers ⁵. Additional studies addressed asset and market structure topics, such as the resilience of collectibles and trading-card markets ⁸ ¹⁷, and an analysis of how private-equity and collectible holdings can be recognized by banks ⁹.

These deliverables were explicitly positioned as exploratory, evidence-driven audits – not predictions or speculative analysis.

- **Infrastructure & Governance:** Organizational groundwork continued. The founder noted quietly securing alignment-related namespaces (Twitter handle “AlignmentHub”, domain alignmentlab.com, etc.) to build neutral spaces for future coordination ¹³. The teams set up a dedicated **Bunny Land Research Division** (aligned with AbsurdSenapiii Labs) to govern these frameworks. Internal processes and documents were uploaded to the public archive (GitHub), including launch-related diligence PDFs and framework materials, ensuring all work is transparent and version-controlled.
- **Communications & Transparency:** Public-facing communications maintained a cautious tone. The LinkedIn and Twitter channels posted plain-language summaries and invited scrutiny, rather than marketing. For example, posts explained internal processes (e.g. a “red team” governance experiment) and specifically sought adversarial feedback ⁶ ⁷. Leadership posts emphasized building steadily and quietly (“calm execution”) ¹⁰, affirmed commitments to human-centered AI workforce development ¹¹ ¹⁸, and discouraged hype. After the launch, communication shifted to a maintenance mode: the team pledged no further token marketing, only a future “post-mortem” once operational data are available ¹⁹.

Evidence Log

Description	Source
“Over the past few hours, we ran a public experiment in transparency... We have now documented the full sequence of events, decisions, and implications in a comprehensive report, written in plain English and suitable for institutional and regulatory review.”	AbsurdSenapiii Labs (LinkedIn, Jan 1, 2026) ⁶
“We recently published a public red-teaming report on Grokipedia... documenting what worked, what failed... If you’ve skimmed or read it... where do you think our methodology could be misleading?” (inviting critique)	AbsurdSenapiii Labs (LinkedIn) ⁷
“This token launch is not a pivot away from our core work...The purpose of this launch is operational and long-term... Supply at launch is fixed and limited... Importantly: • This is not an equity offering • This is not a promise of returns • This is not a solicitation” (token launch disclosure)	Joel A. Nodado (AbsurdSenapiii Labs CEO, LinkedIn) ¹ ³
“I will be less active on LinkedIn today. We are... on the launch and early stabilization phase of a symbolic token initiative... This is not a marketing exercise... focus, responsiveness, and risk control matter more than visibility.”	Joel A. Nodado (LinkedIn) ¹²
“BUNI-005 released (framework, not opinion). We’ve formalised BUNI-005 under Bunny Land Research Division... It’s a universal, ideology-safe framework to evaluate how systems detect, measure, and allocate merit... Designed to survive regulators, red teams, and hostile scrutiny.”	Bunny Land (LinkedIn) ⁴
“Bunny Land Research Division – Short Update: We just released a PhD-level research framework on a hard problem... asset-rich but illiquid holders are treated as ‘unlendable’ by banks. Our position... Private equity and high-end collectibles are not worthless...They should be recognized at a discount, not ignored...Haircuts, custody, monitoring, and liquidation discipline come first... Public, red-team ready.”	Bunny Land (LinkedIn) ⁹

Description	Source
"Most cultural assets don't crash. They just stop changing hands... We've been documenting... anime trading card market... Not because anyone intervenes – because no one panics. We're publishing a research report shortly... Just infrastructure, behavior, and observed clearing ranges."	AbsurdSenapiii Labs (LinkedIn) ⁸
"What does it take to secure an anime trading card worth more than a luxury car? In Singapore, the answer now includes: - Tamper-proof custody chains - Dual-access vault protocols - Armoured transport - Customs compliance..." (framework for physical credibility of TCG assets)	AbsurdSenapiii Labs (LinkedIn) ¹⁷
"Today we completed a BUNI-005 national-scope evaluation of the United States as a complex system... assessing entry filters, performance signals, failure modes... No ideology, no advocacy – only internal consistency, governance quality, and audit-ready diagnostics."	Bunny Land (LinkedIn) ⁵

Token-Related Disclosures

- **Fixed Supply & On-Chain Rules:** The BUNI token has a **predefined, capped supply** at launch and operates under strict on-chain protocols. Future issuance or transfers must follow these smart-contract constraints (no discretionary minting or hidden allocations) ¹⁵.
- **Non-Equity Instrument:** BUNI is explicitly **not an equity security** and does *not* represent ownership in AbsurdSenapiii Labs. It was launched through a third-party platform (SOAR) and governed by contractual rules, with no change to the lab's corporate structure ³.
- **No Promised Returns:** BUNI carries **no guarantee of financial return or dividend**. The launch disclosure emphasizes that it is *not* a promise of profit or an investment solicitation ³. Any value accrual will depend on secondary-market dynamics, not on obligations by the issuer.
- **Complementary Purpose:** The token is described as a "complementary mechanism" to fund infrastructure and align incentives, **layered on top of the existing business** ¹. AbsurdSenapiii Labs continues operating as a privately held company with conventional accounting and assets ²⁰. The token serves as an experimental participation layer, **not a replacement of the company's core operations** ²⁰.
- **Conservative Communication:** All technical details and token mechanics are documented but will not be "aggressively marketed". The team intends only to **inform** partners and regulators of the launch, avoiding speculative or promotional messaging ¹⁹. A thorough post-launch review is planned once operational data (transactions, flows, etc.) can be observed.

Risk and Limitations Acknowledgement

Participants and observers are reminded that these activities and publications are **exploratory and early-stage**. The BUNI token launch occurred in a thin initial market; price movements may be volatile due to low liquidity. Importantly, the project framework is experimental: its success depends on future community adoption and sustained transparency. The organization has not provided financial projections or price guidance, and any outcomes (e.g. token utility or market value) are uncertain. All claims made in published reports and posts are **evidence-based**, but also explicitly **open to challenge**. As noted by leadership, aggressive critique is welcome and expected (the team has even requested structured "disproof" of its own analysis). No guarantee exists that future governance or disclosure failures won't affect the project. In summary, work products should be seen as provisional frameworks rather than finalized solutions. Regulators and stakeholders should interpret them accordingly, with awareness that operational results will evolve.

What Did Not Happen

- **No New Fundraising or Equity Issuance:** Beyond the token launch described, the organization did not pursue any external funding rounds, equity sales, or major financial events.
- **No Abrupt Strategy Changes:** The core business focus (AI alignment research, asset operations, infrastructure) remained unchanged. There were no pivots or new business lines introduced.
- **No Community Governance Takeover:** The launch was tightly controlled per the disclosed rules, with no open token governance processes kicking in yet. In other words, no new governance body or community-driven changes have been enacted since launch.
- **No Marketing Campaign:** The group did not engage in any broad marketing or “hype” efforts. Public communication was intentionally subdued, and no aggressive outreach was performed.

Closing Statement

This first weekly report establishes a transparent record of the post-launch period. It documents all relevant public activities — from research releases to token operations — in factual detail. The team remains committed to evidence-based progress and will continue updating stakeholders on milestones and learnings without speculative claims.

LinkedIn Summary (120–180 words):

During Jan 1–19, 2026, AbsurdSenapiii Labs and its affiliate (Bunny Land Public Policy) executed the launch of their BUNI token (Absurd Bunny Unit) with a disciplined, transparency-focused approach. Public communications emphasized stability over hype: the token's supply is fixed, and the team stressed that BUNI is not equity or a promise of profit ³. Parallel to the launch, the lab published institutional-grade research and audit frameworks. For example, they released a merit-audit system (BUNI-005) for evaluating complex systems (applied to the US and Singapore) ⁴ ⁵, and they ran self-red-team experiments on governance practices ⁶. Other work included analyses of asset markets (e.g. collectibles custody) and AI workforce models, all shared in plain language for regulator review ⁸ ¹¹. The lab invited adversarial critique on its reports and kept a conservative tone. No financial projections or speculative comments were made. This report is a factual account of those publicly observable activities, intended as a baseline for ongoing oversight.

GitHub Archive Note:

Weekly Milestone Report – Jan 1–19, 2026: Chronicles post-launch activities of AbsurdSenapiii Labs, Alignment Country (Bunny Land), and the BUNI token initiative. Includes all public statements, research releases, and governance disclosures for this period. This record is tagged to ensure transparent historical documentation following the token launch.
