Technology	Uniswap uses an automated market maker (AMM) model with user-supplied liquidity pools and a constant-product formula ($x*y=k$) to price swaps, allowing direct ERC-20 token trades on Ethereum without centralized order books	Uniswap's official docs describe it as an automated liquidity protocol on Ethereum using a constant product formula ($x*y=k$), with no intermediaries. This confirms Uniswap uses user-supplied liquidity pools for decentralized token swaps	Uniswap Docs – How Uniswap works	https://docs.uniswap.org/contracts/v2/concepts/protocol-overview/how-uniswap-works	2020-05-18	Tier 1	V
Technology	Uniswap v2 (launched May 2020) eliminated the need to route swaps via ETH (halving cross-pair transaction costs), and Uniswap v3 (May 2021) introduced concentrated liquidity positions and flexible fee tiers to improve capital efficiency	Sygnium's analysis notes Uniswap v2 (May 2020) removed the need to route trades via ether (cutting cross-pair costs), and Uniswap v3 (May 2021) introduced concentrated liquidity positions and variable fee tiers to boost capital efficiency	Learn more about Uniswap	https://www.sygnium.com/research/no-research_topic/learn-more-about-uniswap/	2022-02-11	Tier 1	V

Technology	Uniswap v4, deployed in early 2025 on 12 chains (Ethereum, Arbitrum, Base, Polygon, BNB Chain, etc.), introduced “hooks” that allow developers to plug custom on-chain logic (like dynamic fees or limit orders) into liquidity pools	Wikipedia (citing Uniswap governance sources) reports Uniswap v4 launched in early 2025 across 12 chains (Ethereum, Arbitrum, Base, Polygon, BNB Chain, etc.) and added “hooks” for custom pool logic (e.g. dynamic fees, on-chain limit orders) ⁵	Uniswap – Wikipedia	https://en.wikipedia.org/wiki/Uniswap	2025-03-20	Tier 2	V
Tokenomics	Uniswap’s UNI governance token launched in Sep 2020 with a 1 billion supply. 60% went to the community (15% via airdrop) and 40% to team/ investors/ advisors (4-year vesting). After 4 years, UNI inflates 2% annually	Uniswap’s official blog (Sep 2020) details UNI’s token allocation: 60% (600M) to community (15% airdropped to users) and 40% to team/ investors/ advisors (4-year vesting). It also confirms a 2% annual inflation starting after the 4-year distribution ⁶ ⁷	Introducing UNI (Uniswap Blog)	https://blog.uniswap.org/uni	2020-09-16	Tier 1	V

Tokenomics	Uniswap's protocol includes a "fee switch" (up to 10-25% of LP fees to UNI holders/ treasury), but it remains disabled as of 2023—so liquidity providers still receive 100% of trading fees	Sygnium's report (2022) explains Uniswap's "fee switch" (a protocol fee up to 10-25% of trading fees) was approved but never activated. Thus liquidity providers kept 100% of fees and UNI holders earned no direct fee revenue ⁸	Learn more about Uniswap	https://www.sygnium.com/research/no-research_topic/learn-more-about-uniswap/	2022-02-11	Tier 1	V
Market or Narrative	By late 2021, Uniswap captured ~66% of Ethereum DEX volume (~33% of all DEX volume overall). Although high Ethereum fees in 2021 drove users to PancakeSwap, Uniswap's market share rebounded to ~50% after launching on Layer-2 networks	According to Sygnium, by late 2021 Uniswap held ~66% of Ethereum DEX volume (~33% of all DEX volume). High Ethereum fees did push users to PancakeSwap in 2021, but after Uniswap's L2 expansion its DEX share returned to ~50% ⁹	Learn more about Uniswap	https://www.sygnium.com/research/no-research_topic/learn-more-about-uniswap/	2022-02-11	Tier 1	V

Market or Narrative	Uniswap's trading volumes hit all-time highs in 2025: Q3 2025 alone saw nearly \$300B volume (annualized over \$1T), and Uniswap's DEX market share was ~35-40% by mid-2025	A crypto news report (Sep 2025) highlights Uniswap's record volumes: ~\$270B traded in Q3 2025 (on pace for \$1T+ annually). It also cites CoinGecko data that Uniswap held ~35.9% of DEX market share in August 2025 ¹⁰ ¹¹	Uniswap Crosses \$1T Annual Volume... Risk or Governance	Uniswap is governed by UNI token holders via on-chain proposal and voting. UNI (launched 2020 via an airdrop) grants voting power on protocol upgrades, though holding UNI is not required to use Uniswap	Wikipedia notes Uniswap's governance is community-driven via UNI tokens. It states UNI (launched 2020 and distributed to users) gives holders voting power on protocol changes, although holding UNI is not required to use Uniswap ¹²	Uniswap - Wikipedia	https://en.wikipedia.org/wiki/Uniswap	2024-12-13	Tier 2	V

Risk or Governance	40% of UNI's initial supply went to insiders (team, investors, advisors), raising decentralization concerns since those tokens (vesting over 4 years) could still influence governance votes immediately	Sygnium's report highlights decentralization concerns: 40% of UNI tokens were allocated to team, investors, and advisors. Even though those tokens vest over four years, they could still be used in governance votes immediately 13	Learn more about Uniswap	https://www.sygnium.com/research/no-research_topic/learn-more-about-uniswap/	2022-02-11	Tier 1	V
Risk or Governance	Uniswap's smart contracts have had no major exploits. The main security incidents have been users being tricked into trading scam tokens (due to Uniswap's open listing policy), not vulnerabilities in Uniswap's code	Sygnium Bank (2022) notes Uniswap had no major security breaches; only minor incidents were recorded. It mentions some users lost funds by buying fake tokens on Uniswap (since anyone can list tokens there) 14	Learn more about Uniswap	https://www.sygnium.com/research/no-research_topic/learn-more-about-uniswap/	2022-02-11	Tier 1	V

Appendix - Contract Addresses and Repos

- **UNI token contract** – Ethereum mainnet – `0x1f9840a85d5aF5bf1D1762F925BDADdC4201F984` – Uniswap governance token (UNI) contract address ¹⁸.
- **Uniswap V2 Factory** – Ethereum mainnet – `0x5C69bEe701ef814a2B6a3EDD4B1652CB9cc5aA6f` – Factory contract that deploys Uniswap v2 liquidity pools ¹⁹.
- **Uniswap V2 Router** – Ethereum mainnet – `0x7a250d5630B4cF539739dF2C5dAcb4c659F2488D` – Router contract for executing trades on Uniswap v2 ¹⁹.
- **Uniswap v3 Core repository** – GitHub – <https://github.com/Uniswap/v3-core> – Core smart contracts (AMM logic) of Uniswap v3.
- **Uniswap v4 Core repository** – GitHub – <https://github.com/Uniswap/v4-core> – Core smart contracts of Uniswap v4 (introduces Hooks for custom logic).

Red Flags

- **Insider control:** 40% of UNI supply was allocated to team and investors, which could concentrate governance power among insiders.
- **No revenue sharing:** The protocol's fee switch remains off, meaning UNI holders currently derive no direct fee revenue (raising questions on token value capture).
- **Scam token risk:** Uniswap's open listing allows anyone to create tokens, enabling fake token scams that can trick users into losses.
- **Impermanent loss:** Liquidity providers face risk of negative returns; a late-2021 study found over half of Uniswap LPs lost more to impermanent loss than they earned in fees.

Open Questions

- Will Uniswap governance activate the fee switch in the future, and how would that affect UNI holders' rewards and liquidity providers' earnings?
- As team/investor UNI allocations fully vest (post-2024), what measures will ensure governance remains decentralized and not dominated by large holders?
- What is the timeline and plan for **Unichain** (the proposed Uniswap-specific blockchain), and how might launching a Uniswap chain influence the protocol's ecosystem?
- Have the Uniswap v4 contracts (with the new Hooks feature) undergone comprehensive audits, and what are the results or assurances regarding their security?
