Team	Pacifica was founded in Jan 2025 by co-founders including Constance Wang (former FTX COO), NFTperp founder Jose, and Tony (AsyncBlock).	Pacifica launched on Solana in Jan 2025, co-founded by ex-FTX COO Constance Wang, Jose (founder of NFTperp), and Tony from AsyncBlock ¹ .	Pacifica Project Profile & Token Activities – DropsTab	https://dropstab.com/coins/pacifica	2025-10-01	2
Team	Pacifica's core team includes alumni of Binance, FTX, Coinbase, NFTperp, Jane Street, and Fidelity, as well as AI firms (OpenAI, DeepMind, ByteDance) and academics from MIT, Stanford, and NUS.	Official docs state the team brings experience from top crypto exchanges (Binance, FTX, Coinbase, NFTperp), TradFi firms (Jane Street, Fidelity), and AI labs (OpenAI, DeepMind, ByteDance), with academic foundations at MIT, Stanford, NUS, etc. ² .	About Us – Pacifica (Docs)	https://docs.pacifica.fi	2025-07-15	1

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Team	Pacifica is entirely self-funded, with no external capital raised (no seed investors or VCs involved).	The Pacifica team confirms they "haven't raised external capital," meaning the project is fully self-funded with no venture funding or token allocations to outside investors ³ .	About Us – Pacifica (Docs)	https://docs.pacifica.fi	2025-07-15	1
Team	Co-founder Constance Wang (ex-FTX COO & co-CEO of FTX Digital Markets) also led BD at Huobi and worked at Credit Suisse, bringing notable industry experience.	One Pacifica founder, Constance Wang, previously served as COO of FTX (and co-CEO of FTX Digital Markets), headed business development at Huobi, and was an analyst at Credit Suisse, underscoring her extensive exchange and finance background ⁴ .	Pacifica, the new Perp DEX founded by FTX COO – BlockBeats/ AiCoin	https://www.aicoin.com/en/article/479275	2025-08-20	2

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Technology	Hybrid architecture: Pacifica uses an off-chain matching engine (achieving ~<10ms latency) with on-chain Solana settlement, so trades execute fast while custody remains non-custodial.	Pacifica's design separates a fast off-chain matching engine (delivering sub-10ms round-trip latency) from on-chain settlement and custody; all trades settle on Solana's blockchain with users retaining control of funds ⁵ .	Long-Term Vision and Roadmap – Pacifica (Docs)	https://docs.pacifica.fi/pacifica/long-term-vision-and-roadmap	2025-09-30	1
Technology	Supports up to 50× leverage on perpetual futures, with both cross-margin and isolated-margin trading, using multi-source price oracles and mark pricing for liquidations and funding rates.	According to Messari, Pacifica offers up to 50x leverage and provides both cross and isolated margin. It leverages a multi-source oracle and mark-price mechanism to handle liquidation triggers, funding rate calculations, and position valuations ⁶ .	What is Pacifica? – Messari	https://messari.io/project/pacifica/profile	2025-09-15	2

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Technology	Pacifica's roadmap includes launching a dedicated Pacifica Layer-1 blockchain (built on Substrate with Fast HotStuff consensus) for sub-second finality and scalable throughput to meet high-performance trading needs.	Pacifica plans to build its own Layer-1 chain on Substrate, implementing Fast HotStuff (an optimized BFT consensus) to achieve sub-second finality and scalable throughput, maximizing security and verifiability without sacrificing performance ⁷ .	Long-Term Vision and Roadmap – Pacifica (Docs)	https://docs.pacifica.fi/pacifica/long-term-vision-and-roadmap	2025-09-30	1
Technology	Pacifica integrates AI-driven trading tools: an AI trading agent provides trade ideas and risk analysis to help users execute sophisticated strategies more easily.	The Pacifica platform includes an AI trading agent that assists with trade idea generation and risk analysis, lowering the barrier for users to employ advanced trading strategies by providing intelligent automation and insights ⁸ . Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Tokenomics	No native token: Pacifica launched without a token or coin and has no plans for an ICO or token sale, avoiding any team/VC token allocations or unlocks.	Pacifica's documentation highlights that it has no native token – the project chose to operate without tokenomics (no token launch, no liquidity mining). Being self-funded, there are no seed tokens, VC overhang, or team token unlocks at all ⁹ .	Pacifica Project Profile & Token Activities – DropsTab	https://dropstab.com/coins/pacifica	2025-10-01	2
Tokenomics	Pacifica runs a points rewards program instead: after a snapshot on 2025-09-03, it distributes 500,000 points every week to active traders via a secret formula (designed to prevent gaming) – with no promise of an airdrop.	Pacifica took a snapshot on Sept 3, 2025 and began issuing 500k points weekly (every Thursday) to users. The formula for earning points is deliberately opaque (to deter gaming), and the team has explicitly stated “there is no airdrop” (no token) ¹⁰ .	Pacifica Project Profile & Token Activities – DropsTab	https://dropstab.com/coins/pacifica	2025-10-01	2

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Market/ Narrative	Pacifica is billed as a “next-generation hybrid perpetual exchange” on Solana, promising CEX-grade execution speed combined with on-chain transparency and a clean, trader-first user experience.	A crypto review highlights Pacifica’s positioning as a “Next-Gen Hybrid Exchange” that delivers centralized-exchange-like execution (CEX-grade speed) with on-chain transparency, all wrapped in a user-centric, clean trading product on Solana ¹¹ .	Pacifica Crypto Exchange and Airdrop – Medium (Przemek Chojecki)	https://pchojecki.medium.com/pacifica-crypto-exchange-and-airdrop-5c8d8c97d333	2025-10-06	2
Market/ Narrative	The team’s philosophy is to prioritize performance and user experience over token incentives, betting that a superior product (fast execution, AI features) will retain traders without needing liquidity mining or reward tokens.	Pacifica’s no-token stance is intentional: with no dilution or dump risk from a token, the team is betting that top-tier execution speed, AI support, and user-first design will keep traders coming back, instead of relying on token rewards ¹² .	Pacifica Project Profile & Token Activities – DropsTab	https://dropstab.com/coins/pacifica	2025-10-01	2

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Market/ Narrative	Pacifica touts rapid execution in its narrative: founded Jan 2025, it went from zero to testnet in 3 months and to mainnet in 6 months (launched June 2025), demonstrating an unusually fast build cycle.	The Pacifica team went from founding to a working testnet in ~3 months and to mainnet in ~6 months (mainnet launched June 2025) – an exceptionally fast development turnaround that underscores their execution speed ³ .	About Us – Pacifica (Docs)	https://docs.pacifica.fi	2025-07-15	1
Risk/ Governance	Regulatory scrutiny is a key risk: as a derivatives (perp) exchange, Pacifica could face regulatory or legal challenges in jurisdictions that restrict unlicensed futures trading.	Pacifica's own profile notes that as a derivatives platform, regulatory scrutiny "is always on the table." In other words, authorities may pay special attention to an on-chain perpetuals exchange, posing potential legal/regulatory risks ¹³ .	Pacifica Project Profile & Token Activities – DropsTab	https://dropstab.com/coins/pacifica	2025-10-01	2

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Risk/ Governance	Pacifica relies on Solana's network and oracle feeds, which is a risk: any Solana outage or oracle failure could disrupt trading or lead to incorrect pricing/ funding on the platform.	Project documentation cautions that Pacifica depends on Solana's network stability and accurate price oracle feeds. This reliance means if Solana has issues or an oracle malfunctions, Pacifica's trading and liquidation accuracy could be adversely affected ¹⁴ .	Pacifica Project Profile & Token Activities – DropsTab	https://dropstab.com/coins/pacifica	2025-10-01	2
Risk/ Governance	Liquidity depth is still limited in Pacifica's early stage; thin liquidity can cause higher slippage or execution risk for large trades until the platform attracts more liquidity.	Pacifica's profile notes that liquidity depth is "still growing," which can affect execution quality in the early stages. In practice, this means large orders might experience slippage or poor fills until the platform's liquidity pool deepens ¹⁵ .	Pacifica Project Profile & Token Activities – DropsTab	https://dropstab.com/coins/pacifica	2025-10-01	2

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Risk/ Governance	No token incentives present an adoption risk: without yield farming or token rewards, Pacifica must compete purely on product merit, which could be challenging against rivals that offer tokens to incentivize users.	Analysts note that with no token , Pacifica avoids dilution and dumps but also lacks the “sticky” incentives others use. They pose the question: if there’s no coin reward, what keeps traders loyal? Pacifica is wagering its performance will suffice ¹² .	Pacifica Project Profile & Token Activities – DropsTab	https://dropstab.com/coins/pacifica	2025-10-01	2
Risk/ Governance	A security audit flagged a potential centralization risk: Pacifica’s Solana program had an init function with no access control, meaning if not initialized immediately by the team, an attacker could initialize it and gain control (requiring prompt team action).	Blocksec’s audit of Pacifica’s contracts noted an unprotected initialize function. Unless the team initializes the contract’s central state right after deployment, someone else could call it first and seize program authority. The report urges immediate initialization to avoid this takeover risk ¹⁶ .	Blocksec Audit Report – Pacifica Perp v1.0	https://727612817-files.gitbook.io/.../blocksec_pacifica-fi_perp_v1.0_signed.pdf	2025-04-24	1

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Risk/ Governance	There are questions about how organic Pacifica's volume is: a 50% fee cut and airdrop speculation spurred huge trading volumes (>\$1B/day) while open interest stayed relatively low (~\$69M), suggesting much of the activity may be short-term incentive-driven.	SolanaFloor's analysis notes Pacifica's volume surged after it halved trading fees and rumors of a future token spread. Daily volume passed \$1B, but open interest was only ~\$68-69M, raising doubts about how much of the trading is organic vs. promotion-driven ¹⁷ .	Pacifica Reaches \$1B in Daily Perp Volume... – SolanaFloor	https://solanafloor.com/news/pacifica-reaches-1-b-in-daily-perp-volume-as-trading-activity-accelerates-on-solana	2025-09-30	2
Adoption/ Traction	In under three months from launch, Pacifica attracted over 10,000 active traders, and its total trading volume jumped ~50% in a single week – indicating rapid early user uptake.	By late September 2025, CryptoBriefing noted Pacifica had over 10,000 active traders in under three months of operation. Platform data showed a 50% increase in total volume within just one week, highlighting the protocol's fast-growing traction ¹⁸ .	Pacifica outpaces Jupiter as largest perpetual DEX... – CryptoBriefing	https://cryptobriefing.com/pacifica-overtakes-jupiter-largest-perpetual-dex-solana/	2025-09-29	2

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Adoption/ Traction	As of Sept 29, 2025, Pacifica became the top Solana perpetual DEX by trading volume, surpassing Jupiter – with Pacifica logging about \$440 million in 24h volume while still in closed beta.	Pacifica is now the largest Solana perp DEX by volume, overtaking Jupiter Exchange ¹⁹ . The platform posted over \$440M in 24-hour trading volume ²⁰ while still operating in a closed beta stage, according to reports on Sept. 29, 2025.	Pacifica outpaces Jupiter as largest perpetual DEX... – CryptoBriefing	https://cryptobriefing.com/pacifica-overtakes-jupiter-largest-perpetual-dex-solana/	2025-09-29	2
Adoption/ Traction	By end of September 2025, Pacifica's daily volume exceeded \$1 billion, giving it ~54% of Solana's perp DEX market share (while Jupiter fell below 30% and Drift ~14%).	SolanaFloor data shows Pacifica's daily perp trading volume climbed from <\$200M on Sept 9 to >\$1B by Sept 30, 2025. Pacifica's market share of Solana perp volume hit ~54% by late September, far above Jupiter (~30%) and Drift (~14%) ²¹ ²² .	Pacifica Reaches \$1B in Daily Perp Volume... – SolanaFloor	https://solanafloor.com/news/pacifica-reaches-1-b-in-daily-perp-volume-as-trading-activity-accelerates-on-solana	2025-09-30	2

Topic	Claim (<=40 words)	Evidence Summary (<=40 words)	Source Title	URL	Date (ISO)	Tier
Adoption/Traction	Pacifica's volume continued to surge into October 2025 – single-day trading volumes reportedly reached as high as \$1.75 billion, an unprecedented level for a Solana-based DEX in beta.	Early October 2025 coverage noted Pacifica outpaced all Solana perp rivals, with some single-day volume “prints” as high as \$1.75B ²³ . This remarkable figure underscores the intense trading activity Pacifica achieved even while in invite-only beta.	Pacifica Crypto Exchange and Airdrop – Medium (Przemek Chojecki)	https://pchojecki.medium.com/pacifica-crypto-exchange-and-airdrop-5c8d8c97d333	2025-10-06	2

Appendix

Key Contract Addresses

Name	Chain	Address (Status)	Purpose
Pacifica Perpetuals Program	Solana	<i>Program ID not public</i>	Main on-chain contract for Pacifica's perpetual exchange (handles deposits, trade settlement, and custody via the hot vault) ²⁴ ²⁵ .
Pacifica Cold Vault (Multisig)	Solana	<i>Address not disclosed</i>	Multi-signature vault (using Squads protocol) governing the majority of user funds; replenishes the hot wallet under council approval for enhanced security ²⁶ ²⁷ .

Important Repositories

Name	Platform	URL	Purpose
Pacifica Perp Contracts	GitHub	https://github.com/pacifica-fi/perp-contracts (<i>private</i>)	Source code for Pacifica's Solana programs (perpetual DEX smart contracts). Audited by Blocksec ²⁸ ²⁹ .

Red Flags

- **Regulatory uncertainty:** Being a derivatives exchange (perpetual futures) without licenses, Pacifica could face regulatory crackdowns or legal restrictions in certain jurisdictions ¹³. Regulatory changes or enforcement actions pose a risk to its operations.
- **Dependence on Solana network:** Pacifica's performance and uptime hinge on Solana's blockchain stability. Past Solana outages or congestion could severely disrupt Pacifica's trading, and faulty oracle price feeds could trigger incorrect liquidations ¹⁴.
- **Early-stage liquidity risk:** In its early months, Pacifica's order books may be thin. Low liquidity can lead to high slippage or inability to execute large orders at stable prices until more market makers and users deepen the liquidity pool ¹⁵.
- **No token incentives:** Pacifica offers no yield farming or token rewards. While this avoids "pump-and-dump" issues, it might slow user growth and retention since traders often chase platforms with lucrative token incentives. Pacifica must rely purely on product appeal ¹².
- **Potential inorganic volume:** Pacifica's explosive volume growth may not be entirely organic. A temporary 50% fee reduction and rampant airdrop speculation likely inflated activity. The platform's open interest has lagged volumes, hinting that some trading could be short-term or driven by reward-hunting rather than long-term user stickiness ¹⁷.
- **FTX affiliation concerns:** One co-founder's high-profile role at the now-defunct FTX exchange has sparked community discussion ³⁰. This connection could be a reputational red flag, as some users may mistrust projects involving former FTX executives until Pacifica proves itself independently.

Open Questions

- **Future Token Launch:** Will Pacifica introduce a native token later on? The team insists there is no token or airdrop now ⁹ ³¹, but it remains unclear if the reward points might convert into a token or if a governance token is planned in the long term.
- **Council Signer Identities:** Who are the members of the decentralized council controlling Pacifica's multi-sig cold vault ²⁶? The team has not disclosed the identities or affiliations of the signers. More transparency on who holds these multi-sig keys (and their trustworthiness or independence) is needed to evaluate governance risk.
- **Contract Address Disclosure:** What are the on-chain Solana program IDs for Pacifica's smart contracts? The project has not publicly posted the contract addresses or an on-chain verification of the code. Publicly sharing and verifying the program IDs (and any upgrade authorities) would improve transparency and trust.
- **Beta Rollout and Rewards Utility:** When will Pacifica move from closed beta to open public access? Additionally, what will be the ultimate utility of the accumulated user points if there is truly no token? Clarity on how (or if) points will benefit users (e.g. fee discounts, equity, or other privileges) is still lacking.
- **Audit Resolutions:** Aside from the one disclosed Blocksec audit ¹⁶, have all critical security issues been fully addressed before scaling up? Confirmation that the contract initialization risk and any other findings were mitigated, and whether Pacifica will undergo continuous third-party audits or open-source its code, remains an open area for users and analysts tracking the project.
